The Question isn't *If* You Need Six Sigma in Healthcare — it's *When*.

SIX SIGMA SERVICES

Why 6σ through HPP?

THE 80/20 RULE.

80 percent of the issues that you will attack through improvement efforts are best suited for Lean, but what about the remaining 20 percent that remain after Lean Healthcare application?

SIX SIGMA IS NOT A LIGHT UNDERTAKING.

It requires a significant investment of time and resources. For this reason it is imperative that a solid project selection and approval process be in place to ensure that you are truly tackling the "20 percent" with your Six Sigma efforts. HPP serving as a coach can assist you in applying these tools in a way that adds value.

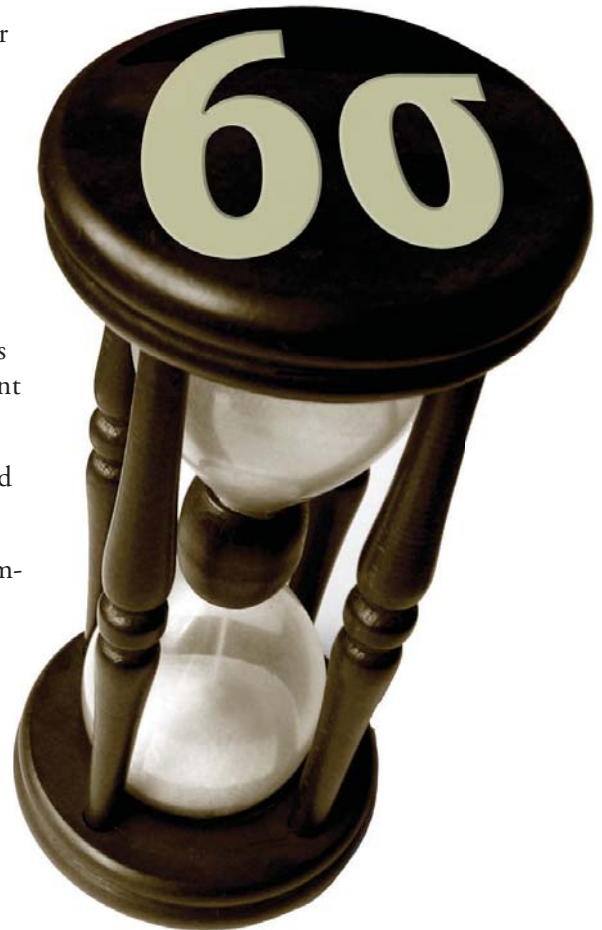

For many who are in the initial phases of their improvement journey, Lean Healthcare methodologies are all that is needed to drive significant change throughout the organization. However, as you continue in your Lean journey, some waste will survive initial Lean efforts and linger unresolved. Our experience has shown that beginning improvement efforts with Lean followed by the incorporation of Six Sigma (6σ) methodologies can yield greater gains for the organization and help drive improvement for more complex, multivariable issues.

Ultimately, the question is not *If* you will need 6σ, but *When*.

To achieve greatest success, HPP's model recommends that a Lean Transformation be undertaken first and the 6σ toolkit be introduced as a complementary tool to the overall process.

If you are already using 6σ tools and would like to now incorporate Lean, we can help you.

Call HPP today to explore how Six Sigma can play a successful role in your organization.
